## **DETAILED ACTION**

Claim 49-58 have been withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected inventions, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 8/17/07.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 37-44 are rejected under 35 U.S.C. 102(b) as being anticipated by Yoon (U.S. Patent No. 5984933).

Claim 37: Yoon teaches a device for applying at least one clip to annular tissue of a heart valve (capable of being used to clip annular tissue of a heart) the device comprising; a shaft having a proximal end and a distal end (Fig. 48); at least one clip (2240) housed within a portion of the shaft and coupled to a teather (Figs. 44 and 48), wherein the at least one clip is capable of penetrating tissue (2241), and wherin at least a portion of the at least one clip is deformable (attaching clip 2241 and 2239); and at least one actuator (2460) at or near the proximal end of the shaft for causing the device to advance the at least one clip from the shaft (Fig. 49).

Application/Control Number: 10/776,682

Art Unit: 3773

Claims 38-40: Yoon teaches the device further comprises a clip crimping member (distal portion of 2440, Fig. 28), a plurality of clips (Fig. 48), each plurality of clips is couple to the tether (Fig. 48).

Claim 41: Yoon teaches at least one clip is T-shaped (see Fig. 44, if 2241 plane is shown, a T is formed out of 2240 and 2241)

Claims 42 and 43: Yoon teaches each of the plurality of clips includes two eyelets (2228), and the tether (2218a and 2218) has parallel segments passing through both eyelets of each clip (Fig. 44).

Claim 44: Yoon teaches a system for applying at least one clip to annular tissue of a heart valve, comprising: the device as claimed above in claim 37; and a stabilization device to capture and immobilize the annular tissue relative to the remainder of the heart (2232, Fig. 44, this inner face of the clip immobilizes the tissue).

Claims 45,46 and 48 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yoon (U.S. Patent No. 5984933), as applied to claim 37 above, in view of Crowley (U.S. Patent No. 5524630).

Regarding claim 45 and 46 Yoon discloses the claimed invention except for a visualization device adapted to directly view a valve annulus in a heart chamber and a visualization device comprising an ultrasonic imaging transducer. However, Crowley

Application/Control Number: 10/776,682

**Art Unit: 3773** 

teaches a visualization device adapted to directly view a valve annulus in a heart chamber (Fig. 30) and a visualization device comprising an ultrasonic imaging transducer (Fig. 3 and 4).

It would have been obvious to one of ordinary skill in the art to include a visualization device at the end of the claimed invention to insure proper installation of the clips during surgery.

Regarding claim 48 Yoon discloses the claimed invention except for a transparent element comprising a transparent balloon inflatable with a transparent inflation medium, however Crowley teaches a transparent balloon inflatable with a transparent inflation medium (col.4 li.35, col. 17 ll. 6).

It would have been obvious to one of ordinary skill in the art to include a balloon at the end of the element to occlude blood flow, as this is common within the art.

Claim 47 is rejected under 35 U.S.C. 103(a) as being unpatentable over Yoon (U.S. Patent No. 5984933) and Crowley (U.S. Patent No. 5524630) as applied to claim 45 above, further in view of Johnson (5766240).

Regarding claim 47 Yoon discloses the claimed invention except for an optical viewing element, however Johnson discloses an optical viewing element (col. 15 II.44) disposed in a transparent element (col. 5 II. 11).

It would have been obvious to one of ordinary skill in the art to include an optical viewing element to insure proper installation of the clips during surgery.

**Art Unit: 3773** 

## Response to Arguments

Applicant's arguments with respect to claims 1-36 have been considered but are moot in view of the new ground(s) of rejection.

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Melissa Ryckman whose telephone number is (571)-272-9969. The examiner can normally be reached on Monday thru Friday 7:30-4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jackie Ho can be reached on (571)-272-4696. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
